

# Stan and the Beginning of the SSC

Maury Tigner

# Charge to the subpanel

*“Consider and make recommendations relative to the scientific requirements and opportunities for a forefront United States High Energy Physics Program in the next five to ten years. Make specific recommendations with respect to possible new construction items for FY1985. In its deliberations the Subpanel should consider opportunities that may be available later as it weighs its specific recommendations. The report of the Subpanel should include a definite recommendation concerning the proposed Colliding Beam Accelerator at Brookhaven National Laboratory. The Subpanel should estimate the program funding required to realize the scientific opportunities associated with the recommendations and should give the relative priorities of the actions it recommends.”*
